

ACTIVE RFID ID RANGE BATTERY LIFECYCLE

ACTIVE RFID ID RANGE BATTERY LIFE

Calculation example for the autonomy of ITEMS IR

For an emission cycle of 1.3s, the red line crosses the horizontal line of the 10 months. BUT you must multiply this value by 10. In reality, for an emission cycle of 1.3s, the tag will have an indicative autonomy of 100 months, or 8 years and 3 months.
