

## PRODUCTS CODIFICATION

### 1. MAIN FEATURE:

Evolution of product codification & addition of new references to the product catalog.

### 2. REASON FOR PRODUCT CHANGE

To optimize product traceability as part of a continuous quality improvement approach, product codification is evolving.

This change of codification is also an opportunity to inform you of the evolution of certain products in the BLE, Wirepas and Quuppa ranges:

- New references for our Blue PUCK ID product integrating major improvements in robustness: IP69K housing, use of higher-performance batteries in sub-zero temperatures.
- New references for all our BLE products embedding the firmware compatible with Bluetooth Advanced Features (BAF).
- Mass production of our Blue LITE TOUCH product.
- Mass production of our WIREPAS range with V300 firmware (integration of the V5 WIREPAS stack)
- New references in our WIREPAS range to offer the “OPEN” option, for easy battery replacement.
- New references in our QUUPPA range with integration of a software patch.

### 3. AFFECTED PRODUCTS

This Evolution affects the BLE, WIREPAS MESH & QUUPPA range.
